

## ITMD461 Lab 5 – Basic CSS

### Objective:

Use basic CSS in an external style sheet to style a simple page.

### Process:

1. Using your text editor, create a new plain text file and save it with an “.html” extension. If your editor asks for encoding you want “UTF-8”. Use your IIT username and lab 5 in the filename. Remember the file naming conventions we discussed in class. ( i.e. user\_lab5.html )
2. Start by adding your HTML content from lab 1. If you have any problems with your lab 1, fix the HTML for this lab.
3. Create an **external CSS style sheet** and link it to your html page. Name this file styles.css. All CSS rules need to be in the external style sheet.
4. Add whatever id and class attributes you need to in order to select the elements with your CSS rules.
5. Use a non-standard CSS Web Font, as demonstrated in class, for all the headlines.
6. Make all your headlines a different color than black. Also make the main page h1 another different color.
7. Make the text in the bullet lists a medium gray color (#777777).
8. Make the third line, your name and email, a bright color of your choice.
9. All other text should be black.
10. Make the entire page’s background color a very light color of your choice.
11. Make a zip file containing both your HTML and CSS files and **upload that zip file to the blackboard assignment**. Name your zip with your IIT username.

This lab will be graded based on how well you follow the directions, how your HTML syntax looks, how your CSS syntax looks, and if you completed all the requested items. Syntax errors, missing requirements, and deviations from the directions will result in deducted points.

Due date is posted in the blackboard assignment.
